

Digital Glass Scale

Description:

The easy-to-read 50 mm LCD display is Red light and ensures reading even in low light areas.

The display on these digital scales provides exact measurements, accurate to 100 g or 0.2 lbs and you can choose whether to be weighed in kilos or pounds. The scale itself weighs just 0.82 kg and also has feet that ensure accuracy on any surface, hard flooring or carpet.

Its sleek design is also easy to read and keep clean because the top of the scales is one flat sheet of glass, so there are no nooks and crannies in which dirt can collect.

It features auto zero and auto shut-off functions that help to save energy and preserve the AAA+ batteries (included) that power the scale.

The LCD display measures 950 x 50 mm. The scales are designed to weigh up to 180 kg/28 st 8 lb capacity.
